

Evercure™

the finest metal roofing and siding process

Everlast is known in the industry for mastering the technique of heat forming™ panels. Now, the same company that made heat forming a standard is proud to introduce the **Evercure™** process. This process includes the recently introduced **CECI™** enhancement that, not only seals the metal's cut edge, but also protects it from natural and commercial corrosive elements. Everlast's panels, now more than ever, are stronger, more durable and less likely to crack and chalk over a duration of time. Everlast is honored to be selected for their second consecutive Gold Key Award and trusts that the **Evercure™** Process will continue to set the standard for quality metal building supplies.

- Everlast II
- Thicker, stronger, better looking
- Eliminates paint cracks at bends
- G100 Galvanizing
- Paints don't scratch as easily
- Heat Forming
- CECI
- Long Lasting
