

OMNI Series Limited Warranty

Everlast Roofing, Inc., Lebanon, PA, hereinafter referred to as "Everlast" or "Seller," warrants that subject to the terms of this Limited Warranty, its pre-painted Everlast II® and Everdrain® OMNI Series product will not:

PAINT LIMITED WARRANTY

1. Crack, check, or peel (lose adhesion) for fifty (50) years;
2. Chalk in excess of a numerical rating of eight (8) for vertical siding panels or a numerical rating of six (6) for roofing and non-vertical siding panels for a period of thirty-five (35) years when measured in accordance with the standard procedure specified in ASTM D-4214 (latest). NOTE: Chalk refers to the formation of loose, removable powder evolved from the coating itself upon breakdown of its resin or binder. The test merely utilizes dark or light colored felt rubbed against the surface to pick up a measurable amount of the chalk - which is then compared to a standard. On a scale of 10 (best) to 0 (worst), a rating of eight is considered a moderate amount of chalk, while a rating of two would represent extreme chalk;
3. Fade or change in color in excess of five (5) units of color difference (Hunter E units) for vertical siding panels or in excess of seven (7) units of color difference (Hunter E units) for roofing and non-vertical siding panels for a period of thirty-five (35) years when measured in accordance with the standard procedure specified in ASTM D-2244 (latest) paragraph 4.3 on a washed test area. NOTE: Most coated surfaces, when exposed to the sun, will fade to some degree over a period of time. Five Hunter E units is a noticeable, but not usually objectionable, degree of color change. Colors may also darken or change hue rather than fade, particularly on exposure in polluted environments. The Hunter E units are intended to apply to color change in either direction in comparison with the original or unexposed color. It is understood that fading or color change may not be uniform if the surfaces are not equally exposed to the sun and elements. For purposes of determining whether an exposed coated panel meets the standards set forth in above paragraph, all chalk, dirt and other film deposits on the area of the panel to be tested for color must be removed by washing prior to evaluation. To wash test area, use a pad of 28/24 mesh cheesecloth and distilled water with mild soap or detergent cleaner. Wet the cheesecloth thoroughly with the solution and rub it, using moderate hand pressure, over an area of panel approximately 4" x 4". Care must be taken to avoid any scratching, burnishing or other physical alteration of the coating surface. After washing as described above, flush off the test area with distilled water and allow to air dry in a vertical position; and
4. Exhibit accumulations of red rust caused by acid rain for a period of fifteen (15) years. Quantities that result in discoloration clearly visible in casual observation, except that this provision shall not apply to any accumulation of red rust which occurs within one-half inch of any portion of the coated surface which is cut or penetrated at any time after application of the pretreatment and paint system to the substrate;

PERFORMANCE LIMITED WARRANTY

1. Leak as a result of perforation by red rust or corrosion caused by acid rain of OMNI Series painted panels for fifty (50) years, except that this provision shall not apply to any perforation which occurs within three-quarters of an inch of any portion of the coated surface which is cut or penetrated at any time after application of the paint system to the substrate. This limited warranty applies only to leaks resulting from perforations caused by rust or corrosion which is established to the reasonable satisfaction of Seller to have been caused by acid rain. Any other losses, damage or expenses, whether direct, incidental or consequential, caused by acid rain or any other corrosive or aggressive atmosphere, such as those contaminated with chemical fumes or salt spray, are excluded from this Limited Warranty.
